The basis of this HUSRES 2006 report is the HUSLAB/Whonet database 2006, which contains susceptibility data on about 137.000 bacteria isolated and studied in 2006 by HUSLAB.

The isolates originate from patients in Helsinki University Hospital, other hospitals in Helsinki - Uusimaa region as well as outpatient health centers.

HUSRES 2006 report contains data on thirty clinically most important bacterial species/groups.

Previous annual reports from 2000 are also located at www.huslab.fi
